

## Fan usage instruction

This usage instruction records the usage method and safety operation of the product. Please check carefully before use.

### 1. Product Introduction

Special fan for air-conditioned clothing: airflow is generated by motor-driven fan blades to promote evaporation of sweat and air circulation to achieve cooling effect, and powered by batteries (batteries are not carried in the parcel), and the user can adjust the wind speed.

Fan air-conditioning clothing is made according to the principle of fan.

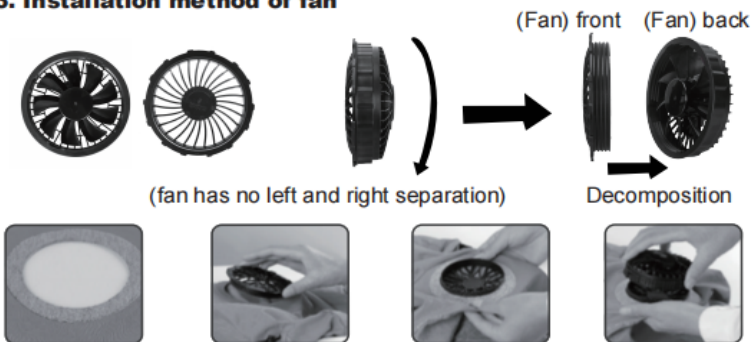

### 2. Product List

1. Two fans

2. One connecting cable

### 3. Installation method of fan

### 4. Connection method of fan

Step 1: Connect the fan with the connecting cable. Insert the bolt of the connecting cable into the power outlet of the two fans, rotate to the right by 90°, and then fix it with the locking claw (there is a non-slip locking claw between the fan and the connecting cable head).

Step 2: Connect the mobile power.

Connect the USB interface or DC interface of the connecting cable to the mobile battery.

Step 3: Fan switch. Three-level wind force, according to the fan switch can adjust the wind force. First turn on the mobile battery, and then press the fan switch (first gear) for the lowest wind, and then press again (second gear) for medium wind, and then press again (third gear) to reach the maximum wind, and then press once to close.

### 5. Precautions

1. Prohibit inflammable and explosive, strong current, thunderstorm when the working environment.
2. Please use the mobile power supply for air-conditioned clothing.
3. Keep the mobile battery, fan, and connecting wire dry.
4. If the insulation layer of the connecting wire is damaged, please stop using it immediately.
5. If the above precautions are not followed, it may lead to electric shock, fire.
